

Here is the official White Paper for UNIQ, fully translated into English and structured for your presentation to the Qubic admins and investors.

## UNIQ: Universal Intelligent Qubic

### White Paper — Educational & Governance Ecosystem

#### 1. VISION AND OBJECTIVES

UniQ is a "Learn-to-Earn" mobile platform designed to transform community engagement within the Qubic ecosystem.

- \* Expertise: Turning passive users into "Power-Users" and qualified ambassadors.
- \* Circular Economy: Creating intrinsic value through the UNIQ token, supported by real deflationary mechanisms.
- \* Network Simulator: Reproducing Qubic's hierarchy (Quorum 676, Computors, Arbitrators, Miners) to educate through practice.

#### 2. USER JOURNEY AND GRADES

Ascension within UniQ is strictly meritocratic, based on knowledge acquisition.

- \* Training Hierarchy: Novice → Pathfinder → Expert → Legend → Master.
- \* Educational Tools: Interactive quizzes, flashcards, and practical simulations.
- \* Examination System: Accessing higher grades requires a payment in UNIQ. Any failure results in the burning of the committed tokens.
- \* Anti-Cheat: Qubic ID integration, dynamic question banks, and strict timers.

#### 3. TOKENOMICS

The UNIQ token is the heart of a closed-loop system designed for scarcity.

- \* Total Supply: 20,000,000 UNIQ.
- \* The "Golden Split" (Flow Distribution): Every token spent in the app is redistributed according to this ratio:
  - \* 50% BURN: Immediate destruction to ensure constant deflation.
  - \* 30% REWARDS: Direct compensation for active network participants (Miners & Computors).
  - \* 20% TREASURY: Technical maintenance and AI evolution.

#### 4. ROLES AND GOVERNANCE (PHASE 2)

The project shifts to full autonomy once the critical mass of experts is reached.

## Selection and Responsibilities:

- \* Computors (676 members): Elected from the top-performing "Masters." They must stake a UNIQ collateral. They vote on governance and validate content.
- \* Miners (uPoW - User Proof-of-Work): Creators of educational content. They earn UNIQ if their work is validated by the Computors.
- \* Arbitrators (50 members): Randomly selected every week from active Computors to ensure impartial justice and resolve disputes.
- \* AIGARTH (AI Tutor): Acts as a personal tutor and system guardian during the growth phase.

## 5. ROADMAP AND SMART TRANSITION

### Phase 1: The Forge (Launch)

- \* Opening of learning modules and exams.
- \* Assisted Governance: The AIGARTH AI fulfills Quorum functions while the first human Masters are being trained.

### Phase 2: Critical Competence Threshold (CCT)

- \* Target: 6,760 active users.
- \* Transition: At this threshold, the system mathematically possesses enough experts (10%) to fill the 676 Computor seats.
- \* Handover: The human Quorum takes full control of the network; the AI reverts to a support role.

### Phase 3: Ecosystem Expansion

- \* Integration of third-party Qubic projects (QMine, QCap, QBay).
- \* Launch of the global ambassador program and access to IPOs via the UNIQ token.

Final Note: This document defines UniQ as the essential training and command center to guarantee the long-term stability and growth of the Qubic network.
