

PROJECT UniQ: The Gateway to Qubic

"Educating the next wave of Qubic users through Gamification and Transparency."

The Vision

UniQ is a modular ecosystem built to eliminate information fragmentation within the Qubic network. We integrate real-time news, market data, and a Learn-to-Earn (L2E) platform into a single mobile-first interface. Our goal is to transform passive observers into educated, active participants, thereby increasing the overall value of the Qubic ecosystem.

Core Modules (MVP Focus)

- * News & Market Aggregator: Automated feeds from official sources (Discord/Telegram/RSS) combined with real-time Qubic and Macro market indicators.
- * Learn-to-Earn (L2E) Engine: Interactive courses where users earn \$UNIQ rewards for completing lessons and passing quizzes about Qubic technology.
- * Incubator Project Tracker: A transparency dashboard that monitors the progress, QA status, and milestones of all projects within the Era 192 program.
- * User Dashboard & Gamification: A personalized profile tracking knowledge levels, badges, and weekly activity to ensure long-term user retention.

Alignment with Era 192 Goals

- * QA & Transparency: Designed for the new 2-week community-led QA cycle. Every milestone is delivered with full technical documentation for public validation.
- * Lean Operations: We utilize a modular development approach with low fixed costs, focusing on stability and high-performance UI (Flutter/Node.js).
- * Ecosystem Synergy: UniQ acts as a "Force Multiplier." We don't compete with other dApps; we promote them through our Tracker and dedicated educational modules.

Compressed Roadmap (6 Months)

- * Phase 1 (Jan–Feb): Launch of News, Market Feed, and Project Tracker (MVP).
- * Phase 2 (Mar–Apr): Implementation of the L2E Engine, Quiz system, and Reward distribution logic.
- * Phase 3 (May–Jun): Non-custodial Wallet integration and Marketplace for premium educational content.

Why UniQ? (ROI)

- * User Growth: Lowers the barrier to entry for new investors and developers.
- * Risk Mitigation: Provides the community with a clear view of which projects are delivering and which are stalling.
- * Educated Community: Reduces the burden on support channels by providing a self-service learning hub.
